DE LAENDER ET AL.  
Serial No. 10/660,067  
Filing Date: September 11, 2003

---

In the Claims:

Claims 1-63 (Cancelled).

64. (Currently Amended) A pallet comprising:

a at least one top support member for supporting  
~~adapted to support~~ cargo;

a at least one bottom support member;

a plurality of solid support blocks for separating the  
~~at least one top and bottom support members~~ so that a lifting  
member can be inserted therebetween;

each solid support block comprising a composite  
material entirely devoid of any openings and comprising at least  
one cellular material and at least one thermoplastic thermal-  
~~plastic~~ material, and having upper and lower support member  
fastening surfaces ~~devoid of any openings~~ for ~~completely~~ defining  
respective upper and lower support member fastener areas; and

a plurality of fasteners ~~for~~ fastening the ~~at least one~~  
top and bottom support members to the plurality of solid support  
blocks via the respective upper and lower support member fastener  
areas.

65. (Previously Presented) The pallet according to  
claim 64, wherein the plurality of solid support blocks comprises  
three groups of blocks, wherein a first group of support blocks  
is positioned in a first row adjacent a first edge of the pallet,  
a second group of support blocks is positioned in a second row  
across the center of the pallet, and a third group of support
